OFFICE OF GENERAL COUNSEL**

**OIL AND GAS DOCKET
NO. 08-0250694**

**IN THE KNOTT, WEST (SPRABERRY)
FIELD, HOWARD AND MARTIN
COUNTIES, TEXAS**

**FINAL ORDER
AMENDING FIELD RULES
FOR THE KNOTT, WEST (SPRABERRY) FIELD,
HOWARD AND MARTIN COUNTIES, TEXAS**

The Commission finds that after statutory notice in the above-numbered docket heard on March 9, 2007, the presiding examiner has made and filed a report and recommendation containing findings of fact and conclusions of law, for which service was not required; that the proposed application is in compliance with all statutory requirements; and that this proceeding was duly submitted to the Railroad Commission of Texas at conference held in its offices in Austin, Texas.

The Commission, after review and due consideration of the examiner's report and recommendation, the findings of fact and conclusions of law contained therein, hereby adopts as its own the findings of fact and conclusions of law contained therein, and incorporates said findings of fact and conclusions of law as if fully set out and separately stated herein.

Therefore, it is ordered by the Railroad Commission of Texas that the following field rules shall be adopted for the Knott, West (Spraberry) Field, Howard and Martin Counties, Texas: are amended to include the following rules:

RULE 1: The entire correlative interval from 6,770 feet to 9,250 feet as shown on the log of the Phillips Unit Well No. 1 (API No. 42-317-34043), T&P RR Co Survey, A-32, Martin County, Texas, shall be designated as a single reservoir for proration purposes and be designated as the Knott, West (Spraberry) Field.

RULE 2: No well shall hereafter be drilled nearer than THREE HUNDRED THIRTY (330) feet to any property line, lease line or subdivision line and no well shall be drilled nearer than SIX HUNDRED SIXTY (660) feet to any applied for, permitted or completed well in the same reservoir on the same lease, pooled unit or unitized tract.. There is no between-well spacing limitation between a horizontal drainhole well and any vertical well, or between the drainholes of two horizontal drainhole wells with in the first TWO HUNDRED (200) feet or the last TWO HUNDRED (200) feet of either horizontal well. The aforementioned distance is the minimum distance to allow an operator flexibility in locating a well. Provided however, that the Commission will grant exceptions to permit drilling within shorter distances and drilling more wells than herein prescribed whenever the Commission shall have determined that such exceptions are necessary either to prevent waste or to prevent the confiscation of property. When exception to these rules is desired, application therefor shall be filed and will be acted upon in accordance with the provisions of Commission Statewide Rule 37, which applicable provisions of said rule is incorporated herein by reference.

RULE 3: The acreage assigned to the individual oil well for the purpose of allocating allowable oil production thereto shall be known as a proration unit. The standard drilling and proration units are established hereby to be EIGHTY (80) acres. No proration unit shall consist of more than EIGHTY (80) acres except as hereinafter provided. The two farthestmost points in any proration unit shall not be in excess of THREE THOUSAND TWO HUNDRED AND FIFTY (3,250) feet removed from each other; provided however, that in the case of long and narrow leases or in cases where because of the shape of the lease such is necessary to permit the utilization of tolerance acreage the Commission may after proper showing grant exceptions to the limitations as to the shape of proration units as herein contained. All proration units shall consist of continuous and contiguous acreage which can reasonably be considered to be productive of oil.

If after the drilling of the last well on any lease and the assignment of acreage to each well thereon in accordance with the regulations of the Commission there remains an additional unassigned acreage of less than EIGHTY (80) acres, then and in such event the remaining unassigned acreage up to and including a total of FORTY (40) acres may be assigned as tolerance acreage to the last well drilled on such lease, or may be distributed among any group of wells located thereon so long as the proration units resulting from the inclusion of such additional acreage meet the limitations prescribed by the Commission.

Operators shall file with the Commission certified plats of their properties in said field, which plats shall set out distinctly all of those things pertinent to the determination of the acreage credit claimed for each well; provided that if the acreage assigned to any proration unit has been pooled, the operator shall furnish the Commission with such proof as it may require as evidence that interests in and under such proration unit have been so pooled.

RULE 4: The maximum daily oil allowable for each well in the subject field shall be 121 barrels of oil per day and the actual allowable for an individual well shall be determined by the sum total of the two following values:

- a. Each well shall be assigned an allowable equal to the top allowable established for a well having a proration unit containing the maximum acreage authorized exclusive of tolerance acreage multiplied by 95% and by then multiplying this value by a fraction, the numerator of which is the acreage assigned to the well and the denominator of which is the maximum acreage authorized for a proration unit exclusive of tolerance acreage.
- b. Each well shall be assigned an allowable equal to its potential based on the most recent well test filed with the Commission multiplied by 5%, provided that this value shall not exceed 121 barrels of oil per day multiplied by 5%.

Done this 24th day of April, 2007.
