

ACKNOWLEDGEMENTS

The Railroad Commission of Texas acknowledges the U.S. Environmental Protection Agency (EPA) for its support of the Waste Minimization Program. The EPA provided the Commission with a grant that partially funded the development and distribution of this manual. Continued support from EPA partially funded the revision and continued distribution of this manual.

Texas' oil and gas companies and associations were instrumental in the development of this manual. Waste management plans provided by Texaco E&P Inc., Amoco Production Company, and Warren Petroleum were valuable sources of information. Numerous companies and associations responded to the Commission's pollution prevention survey in May, 1993, and participated in the subsequent Pollution Prevention Workshop. These companies and associations also reviewed drafts of this manual and provided valuable suggestions and comments regarding its final content.

In particular, the oil and gas companies who provided the case histories of successful waste minimization are acknowledged for their contribution. Case histories are the "backbone" of the Waste Minimization Program!
